

MHG Systems' Bioenergy Solution Ranked top 10 in the Global Innovation Competition

MHG Systems' MHG Bioenergy ERP –Service had a great success in IT-Company Logica's Global Innovation Venture Partner final competition in Stockholm last week. MHG's service concept was ranked top ten from 650 global innovation proposals.

MHG Systems combines modern technology and state of the art software to boost up any kind of bioenergy business.

Swedish IT-Company Eurostep with its innovative PLM solution for life cycle management was the winner of Logica's Global Innovation Venture Partner (GIVP) Programme's Final Competition in Stockholm. "For us a concrete cooperation with Logica, a leading business and technology service company, is more important than the 1st prize in the contest" states managing director **Seppo Huurinainen** of MHG Systems. Never earlier in Logica's history a small company like MHG has accomplished similar score. This is an excellent proof that MHG's concept is now highly valued.

With MHG Systems' Bioenergy ERP Service, the energy utilities and fuel suppliers get accurate information about the quality, quantity, energy content and origin of the feedstock. The operators in the supply chains of wood chips, short rotation forestry, pellets and biocoal are able to control different activities like expenses and profit phase by phase. EU-legislation requires that member states increase biomass usage in power and heat production. In the near future biomass is more in need, in particular, in power generation in East-Europe, the USA and China for instance.

"We can offer our mutual clients an operative solution service in order to optimise the production of biomass, and Logica, as an international agent, can hold a key position there to present the Finnish innovation to the rest of the world," **Heikki Tiihonen** of Logica states

Logica's innovation partner competition is aimed at finding partners in small and medium sized companies to create solutions for our mutual clients.

MHG Bioenergy ERP

The MHG Bioenergy ERP service is a true operative tool, designed for electricity, heating, pellets, forest industry and forest service companies. It can be used via web browser or mobile devices. It is a specific bioenergy sector ERP system and map service solution, which provides valuable information for developing one's business operations. Bioenergy ERP allows the use of new, particularly contract-based, and empowering operational models. The superior features of the service include transparency throughout the delivery chain, managing the moisture content of bioenergy masses, reporting features based on the amount of energy, i.e. megawatt hours, and accounts and invoicing.

MHG Systems Ltd

MHG Systems Ltd is one of the world's leading suppliers of bioenergy ERP systems. The company utilises its partner network to produce customer-oriented IT and map service solutions designed for developing bioenergy, and field work business operations. MHG ERP synthesizes mobile communications, the Internet, real-time maps, satellite-based location information, RFID, and CO2 monitoring into one business-enhancing service, and allows the use of new and empowering operational models, accurate cost monitoring and real-time enterprise resource planning of biomasses and delivery chains. The company's services bring significant cost savings and environmental benefits to all operators in the bioheat, bioelectricity, and biofuel production chain.

Through many years of development work MHG Systems has together with our customers and partners, created a Service concept. It combines best practices, modern technology and mobile solutions into one business-enhancing service. MHG Systems' services allow companies to verify the social and environmental responsibility of their operations, as the origin of biomasses, energy content, carbon dioxide emissions, and costs and profits can be reliably proven. MHG Bioenergy ERP Service helps customer companies to boost their business operations.
