Inspur and MHG Systems kick-off one stop solution for Chinese bioenergy industry

The leading Chinese comprehensive IT solutions provider Inspur group and MHG Systems have established a partnership in order to provide an integrated ERP (Enterprise Resource Planning) solution for Chinese bioenergy businesses.

MHG ERP software enables Inspur to offer a more comprehensive solution, by complementing the existing Financial ERP, OA and group control ERP systems with innovative biomass storage and fieldwork management functionalities. The new features include real-time monitoring with map software on mobile devices. From MHG's point of view, Inspur is an excellent partner for the Chinese market as it has a well established sales network, in addition to some of the most sophisticated IT solutions in China.

More information about Inspur-MHG one stop solution at:

http://www.mhgsystems.com/images/pdf/MHGInspur_One_stop_solutionV20.pdf

Inspur has already begun to market MHG's products in China, and the two companies are working on a per project basis. Besides the bioenergy industry there is huge market potential for a jointly built IT solution for the agriculture and wine sectors.

MHG Systems Ltd

MHG Systems Ltd provides specific ICT, map, and field work management services for the development of new economically sustainable bioenergy businesses through the use and optimisation of the various kinds of feedstock and resources available. The company's services bring significant cost savings and environmental benefits to all operators in the value chain.

MHG ERP combines mobile communications, the Internet, real-time maps, satellite-based location information, RFID, CO₂, and moisture monitoring of biomasses into one business-enhancing service, and enables the use of new and empowering operational models, accurate cost monitoring and real-time enterprise resource planning of biomasses and delivery chains.
